

8-17-2014

To whom it may concern:

In an effort to meet the guidelines set forth by House Bill 5, the Math Department at Western Texas College has determined that Querium TSI Math Prep is the most effective, efficient, and economical solution for schools to incorporate into their current math curriculum. This program is specifically designed to prepare students for the new TSI Math assessment. The program individualizes lessons to ensure each student is focusing on his or her own individual math weaknesses.

A flyer has been provided to help guide students in purchasing and accessing the program. The program cost is around \$30 per student. When prompted for the school, it is important that the students choose Western Texas College. The program contains 4 modules. The goal for each student will be to complete all 4 modules in a 16 week time frame, which means that the students are expected to complete one module every 4 weeks. Querium will provide Western Texas College and a designated high school representative a weekly student progress report.

At the end of the 16 week period the students will need to sign up to take the TSI Math placement test which costs \$10. Students who successfully pass the assessment will be deemed college ready in mathematics. Those students who do not pass would be encouraged to repeat the program during the spring semester as their access to the Querium program should still be valid.

Schools who wish to purchase the program for groups of students rather than individually should contact Sharon Young (sharon@querium.com) or Aruni Gunasegaram (aruni@querium.com).

Sincerely,

The Western Texas College Math Department
Alisa Carter, Ava Russell, Garrett Hicks and Stephanie Ducheneaux
